PROJECTS

Mark IV - Interactive academic virtual robot - Github **2026**

Contributed to SECE-Mark IV, an institutional large language model initiative focused on LLM research and model development, collaborating with the project team to explore model capabilities, technical workflows, and implementation approaches.

Trinetra | A border surveillance for tracking movements **2026**

Built Trinetra, an AI-driven surveillance platform using React.js, Python, FastAPI, OpenCV, YOLOv8, Groq API, MongoDB, and Redis. Implemented real-time video analytics, object detection, movement tracking, anomaly identification, and automated threat alerts to improve situational awareness and support rapid security decisions.

Unified Academic Platform - Github **2026**

Built an Agentic Framework for a Unified Academic Platform designed to streamline institutional workflows, educational services, and multi-agent interaction across academic communities. Developed a responsive frontend using React featuring an interactive Chat Swarm Portal, Message Hub, Calendar Sync, and WebRTC audio/video meeting spaces. Built FastAPI backend services operating a 6-agent AI swarm orchestrated by a Supervisor Router with a Retrieval-Grounded Generation (RAG) pipeline over PostgreSQL to eliminate hallucinations. Implemented zero-latency regex fast-path routing, sliding-window conversation memory, and persistent telemetry logging to optimize token usage, secure data management, and deliver a scalable, high-performance platform.
